RE: Vaccine supply open to all 16+

The Kansas Department of Health and Environment announces that today, vaccines shall be available to everyone age 16+, not just those who live or work in Kansas. Kansas joins more than 20 other states that have already opted to expand their vaccine access to non-residents. COVID-19 does not stop at the borders, making vaccine access to everyone a public health necessity. This expansion will also protect Kansans as well. Vaccine providers in Kansas should make vaccine supply available to everyone 16+, regardless of where they live or work.
